

BUILD PARLOUR CREATIVE — FULL PRODUCTION WEBSITE

You are the lead creative technologist, senior web designer, UX strategist, SEO architect, motion designer, and senior frontend engineer responsible for designing and building the complete website for Parlour Creative.

This is not a request for a mockup, landing page, template, wireframe, or generic agency website.

Build the actual production-ready website.

The website needs to feel like a serious, established, premium creative/marketing company that could confidently pitch a \$10,000–\$50,000+ project to a developer, hospitality group, brokerage, or founder.

The site should be sophisticated enough that a prospective client can land on it, understand what Parlour does within seconds, explore substantial proof of work, understand the commercial value of hiring Parlour, and contact the company without needing a sales explanation.

1. PRIMARY OBJECTIVE

Parlour's immediate commercial objective is:

3–5 retainers at \$5,000+ USD/month by December 31, 2026.

The website is therefore a sales asset, not merely a portfolio.

It needs to accomplish five things:

1. Establish immediate credibility.
2. Clearly differentiate Parlour from social-media agencies, production houses, traditional advertising agencies, and fragmented freelance vendors.
3. Make the Blue Ocean Belize work feel like substantial commercial proof.
4. Demonstrate that Parlour can operate from site/concept → strategy → brand → creative → digital → marketing → leads → sales/bookings.
5. Generate qualified enquiries from developers, hospitality operators, brokerages, founders, and other place-based businesses.

The website must make Parlour feel capable of handling serious regional accounts across:

- Belize
- Mexico
- Costa Rica
- Panama
- Colombia
- the Caribbean
- Argentina
- Uruguay
- broader Latin America

Belize is the current operating base and primary market.

Do not make Parlour feel like a small local Belize marketing company.

It should feel like:

A sophisticated regional creative and commercial marketing company headquartered in Belize.

2. SOURCE OF TRUTH

I am providing you with the complete:

“Parlour Creative — V1 Growth Playbook”

Use that document as the primary source of truth for:

- positioning
- messaging
- services
- offers
- target customers
- pricing architecture
- proof points
- case studies

- tone
- terminology
- founder story
- differentiation
- sales funnel
- markets
- SEO direction
- CTAs

Do not randomly invent claims, clients, awards, statistics, credentials, or capabilities.

Where the playbook contains [CONFIRM], [Laura to confirm], [placeholder], or another unresolved item:

do not fabricate the information.

Instead:

- create the site structure so the content can be inserted later;
- use sensible temporary placeholder content only where necessary;
- clearly mark unresolved content in the code/content model;
- make it easy to replace.

3. IMPORTANT CREATIVE REFERENCE — GLADSTONE

Laura's strongest creative reference is:

Gladstone Advertising

Reference website:

<https://gladstoneadvertising.com/>

Laura previously worked with Gladstone and wants Parlour's digital presence to capture much of the same sophistication, confidence, visual hierarchy, editorial quality, project-first thinking, and overall discipline.

Study the reference carefully.

However:

DO NOT CLONE THE WEBSITE.

Do not copy:

- text
- brand language
- exact layouts
- proprietary graphics
- source code
- images
- logos
- exact animations
- exact navigation
- distinctive branded components

Instead, extract the underlying principles.

The principles to borrow are:

- work-first navigation
- premium editorial presentation
- extremely strong imagery
- large typography
- restrained copy
- confident whitespace
- project-led storytelling
- clear categorization
- sophisticated motion
- immersive case studies
- strong art direction

- minimal interface chrome
- high-quality transitions
- strong use of photography/video
- premium real-estate/hospitality sensibility
- feeling of an established creative firm rather than a SaaS website
- visual proof before excessive explanation

Then reinterpret those principles into a distinctly Parlour identity.

Parlour should feel warmer, more tropical, more architectural, more editorial, and more connected to place.

4. PARLOUR POSITIONING

Core positioning:

Parlour is a strategy-led brand and marketing company for places, the businesses built around them, and the founders who lead them.

Real estate and hospitality lead the work.

Parlour can become involved as early as the site/concept stage, working alongside architects, engineers, planners, permitting professionals, builders, and specialist partners.

The company then carries the project through:

commercial strategy → positioning → brand → story → creative → content → website → campaigns → paid media → lead capture → CRM → sales/bookings

The key idea:

We turn places into brands people want to belong to, and into sales, enquiries and bookings.

Secondary positioning:

The senior-led partner from site to sales.

The website must make this concept visually obvious.

5. THE CENTRAL PROBLEM PARLOUR OWNS

Parlour believes many property and hospitality companies don't have a simple "marketing" problem.

They have a:

fragmentation problem.

One person posts.

Another runs ads.

Another shoots video.

Another builds websites.

Another handles leads.

Nobody owns the commercial strategy.

The result is activity without a coherent system.

Parlour replaces that fragmentation with:

one strategy one creative direction one accountable lead one marketing system

This should become one of the strongest conceptual ideas throughout the website.

6. WHAT PARLOUR IS NOT

The site should subtly but clearly differentiate Parlour from:

Not a social media agency.

Posting is an output.

It is not the product.

Not a production house.

Production exists to serve strategy.

Not a real estate agency.

Parlour helps developers, brokerages and agents sell.

Not a generic "full-service" agency.

Avoid this phrase.

Also avoid:

- full-service
- 360-degree
- one-stop shop
- turnkey
- disruptive
- game-changing
- cutting-edge
- results-driven
- bringing your vision to life
- passionate team
- bespoke solutions

Prefer:

- one marketing system
- strategy through execution
- senior-led
- accountable
- commercial strategy
- enquiries
- sales
- bookings
- direct revenue
- qualified leads
- site to sales

7. WEBSITE EXPERIENCE

The website should feel expensive.

Think:

- luxury architecture publication
- premium real-estate developer
- sophisticated creative agency
- editorial design magazine
- high-end hospitality brand

Not:

- SaaS
- startup
- generic marketing agency
- WordPress template
- corporate consulting firm
- local social-media agency

Use restraint.

Do not fill every section with text.

Let imagery, typography, motion, whitespace, and project storytelling do significant amounts of the communication.

8. WEBSITE INFORMATION ARCHITECTURE

Build a complete multi-page website.

At minimum:

HOME

The homepage should immediately communicate:

- what Parlour is
- who it works with
- where it operates
- what makes it different

- proof
- selected work
- commercial capabilities
- CTA

Suggested flow:

Hero

Large cinematic visual/video.

Minimal headline.

Potential direction:

We turn places into brands people want to belong to.

Secondary line:

Strategy, brand, creative and marketing from site to sales.

Primary CTA:

View our work

Secondary CTA:

Start a conversation

Do not necessarily use these exact words if your design research produces something stronger, but preserve the underlying message.

Section: The problem

Introduce fragmentation.

Section: What Parlour does

Show the system visually.

Potential progression:

Site → Strategy → Brand → Story → Digital → Distribution → Sales

Make this highly visual and interactive.

Section: Selected work

Large editorial project cards.

Prioritize:

- Blue Ocean Belize
- Caves Branch River Estates
- Offi Belize
- other verified projects

Each project should display relevant disciplines/tags.

Section: Proof

Use verified metrics where available.

Example:

5 developments

20+ disciplines

120+ production hours

14 videos

Only use figures supplied by the playbook unless explicitly marked as needing confirmation.

Section: Site to sales

This should become one of Parlour's strongest differentiators.

Section: Who we work with

Developers.

Hospitality.

Brokerages.

Founders.

Brands built around place.

Section: Founder story

Laura + Andre.

Section: CTA

A premium, direct invitation.

9. WORK PAGE

This should be one of the most important pages on the site.

Navigation should make Work highly prominent.

The Work page should behave more like an editorial portfolio than a conventional case-study grid.

Each project needs:

- large hero image/video
- project name
- client
- location
- category
- disciplines/services
- short strategic description
- visual gallery
- outcomes where verified
- project narrative
- related projects
- CTA

Create filtering/category architecture.

Potential categories:

Real Estate

Hospitality

Brand

Digital

Content

Strategy

But do not overcomplicate filtering.

The primary experience should remain visual.

10. CASE STUDY TEMPLATE

Create a reusable dynamic case-study system.

Every case study should support:

- hero video
- hero image
- client
- location
- year
- sector
- services
- challenge
- strategy
- execution
- outcome
- gallery
- videos
- website embeds/screenshots where appropriate
- related work
- CTA

The case-study template should be capable of telling a project story from:

Problem → Thinking → Making → Distribution → Commercial Outcome

Do not simply create:

"Client needed a website. We built a website."

Instead demonstrate the strategic system.

11. BLUE OCEAN CASE STUDY

Blue Ocean Belize is currently Parlour's most important proof point.

Treat this as a flagship case study.

The playbook says Parlour is retained across five developments:

- Laguna Bay
- Laguna Rio
- Laguna Point
- Bonefish Bay
- Laguna Point Estates

The work spans multiple disciplines.

Potentially include:

- positioning
- identity
- content
- production
- paid media
- CRM handoff
- SEO
- AI-search visibility
- co-broker materials
- development marketing
- website
- campaign systems

Use only confirmed information.

Create the architecture so additional metrics can easily be added later:

- leads
- CPL
- lead growth
- enquiries
- sales
- inventory
- traffic
- conversion

Do not invent results.

12. CAVES BRANCH RIVER ESTATES

Build a dedicated case study for:

Caves Branch River Estates

The playbook describes it as a demonstration of the “site to sales” model.

The site should show how Parlour can connect:

- commercial strategy
- development positioning
- website
- integrated campaigns
- content
- land/project communication
- building solutions
- architectural/engineering coordination
- sales infrastructure

If exact project details are missing, create structured placeholders rather than fabricated claims.

13. OFFI BELIZE

Create a dedicated case study for Offi Belize if the supplied materials support it.

Position it around:

- digital platform
- real estate distribution
- development visibility
- lead generation
- marketplace infrastructure

Again, only use verified claims.

14. SERVICES

Create a strong Services page.

Do not simply list 30 services.

Organize the company around systems.

Potential architecture:

Strategy

Commercial strategy Positioning Audience strategy Go-to-market Launch strategy

Brand

Naming Identity Brand systems Story Campaign concepts

Creative

Art direction Photography Film Drone FPV Founder content Campaign creative

Digital

Websites Landing pages SEO AI-search visibility Analytics Conversion infrastructure

Performance

Meta Google YouTube Lead generation Lead routing CRM Email WhatsApp

Experiences

Launches Sales galleries Events Partnerships Brand activations

Project coordination

Architects Engineers Planners Permitting Building-solution partners

But organize this so it reinforces:

one system, not a list of vendors.

15. OFFER ARCHITECTURE

Create an Offers or Approach page that introduces:

Growth Diagnostic

\$4,500 one-time.

Three weeks.

Audit:

- brand
- website
- ads
- content
- lead handling
- sales handoff
- competitors
- buyer/guest profile

Ends with a 90-day growth plan.

Credited toward month one if the client signs a retainer within 30 days.

Growth Partner

\$5,000–\$8,000/month.

Six-month minimum.

For:

- brokerages
- top agents
- developments in sales
- boutique hotels
- resorts

Launch Partner

\$10,000–\$15,000/month.

For:

- new developments
- new phases
- hotel openings
- relaunches

Portfolio Partner

From \$15,000/month.

For:

- developers
- hospitality groups
- multiple projects

Project Partner

Site-to-sales.

Strategy/planning:

\$15,000–\$40,000

Then:

From \$12,000/month through launch.

Partner professional fees are separate.

Do not make pricing the dominant feature of the website.

The site should sell the value and sophistication of the engagement first.

16. FOUNDER STORY

Create a dedicated Founder Story offering.

This is important because founders can become an entry point into larger company retainers.

Include:

- founder positioning
- story platform
- story pillars
- monthly shoot
- short-form video
- long-form film
- LinkedIn
- Instagram
- profile optimization
- speaking
- press
- partnerships

Price:

\$5,000–\$7,500/month.

Founder Film:

\$8,000–\$15,000.

Founder Documentary:

from \$5,000/month.

Stephen's current rate is an investment-client exception and should NOT appear publicly.

17. ABOUT PAGE

The About page should NOT read like a corporate biography.

It should communicate:

why Parlour exists.

Central story:

Laura Curridor spent eight years at Artform in Toronto, eventually becoming Director of Marketing.

Her background combines:

- marketing
- advertising
- design
- communications
- design-build
- real estate
- hospitality

Parlour brings that thinking to Belize.

Andre Acosta leads Creative & Strategy and production.

Andre's role should communicate that Parlour has genuine internal creative-production capability rather than outsourcing everything.

Create strong founder sections for:

Laura Curridor

Founder, CEO & Chief Strategy Officer

and

Andre Acosta

Creative & Strategy Director

Only use titles after confirming them.

18. CONTACT / CONVERSION

The website must have multiple conversion paths.

Primary CTA:

Start a conversation

Secondary CTA:

View the work

Potential CTA:

Book a Growth Diagnostic

The contact form should be intelligently designed.

Ask enough information to qualify leads without making the form annoying.

Suggested fields:

Name

Company

Email

Phone / WhatsApp

Company type:

- Developer
- Hospitality
- Brokerage
- Founder
- Other

What are you working on?

Budget range:

- \$5K–\$10K/month
- \$10K–\$15K/month
- \$15K+/month
- Project-based

What do you need help with?

Message

Timeline

Do not make the form feel like a low-end lead-generation funnel.

19. SEO — THIS IS A MAJOR REQUIREMENT

SEO must be treated as architecture, not something added at the end.

The site should be technically optimized for:

Belize

Especially:

- Belize marketing agency
- Belize marketing company
- Belize advertising agency
- Belize creative agency
- Belize real estate marketing
- Belize real estate marketing agency
- Belize property marketing
- Belize development marketing
- Belize hotel marketing
- Belize hospitality marketing

- Belize resort marketing
- Belize branding agency
- Belize web design
- Belize digital marketing
- Belize content agency
- Belize photography and video production
- Belize real estate branding

Also target location-specific terms where appropriate:

- San Pedro marketing agency
- Ambergris Caye marketing
- Placencia marketing
- Cayo marketing
- Belize City marketing
- Belize real estate agency marketing

But do NOT keyword-stuff.

The copy must remain sophisticated.

20. REGIONAL SEO

Build the information architecture so Parlour can later create location landing pages for:

Belize

Mexico

Yucatán

Riviera Maya

Costa Rica

Panama

Colombia

Caribbean

Argentina

Uruguay

Do not create thin doorway pages.

Each future location page should be capable of containing genuinely useful regional content, relevant projects, market knowledge, and localized positioning.

21. TECHNICAL SEO

Implement:

- semantic HTML
- correct heading hierarchy
- canonical URLs
- metadata
- Open Graph
- Twitter/X cards
- XML sitemap
- robots.txt
- schema.org structured data
- Organization schema
- LocalBusiness/ProfessionalService schema where appropriate
- Service schema
- Article schema for future insights
- BreadcrumbList
- WebSite schema
- ImageObject where useful
- Case-study structured content where appropriate

Make all pages indexable unless there is a deliberate reason not to index them.

Use descriptive URLs.

Example:

/work/blue-ocean-belize

/work/caves-branch-river-estates

/services/real-estate-marketing

/services/hospitality-marketing

/insights/...

Avoid:

/page?id=123

22. LOCAL SEO

Build a strong Belize local-search foundation.

Include:

- consistent company name
- Belize location information
- service areas
- organization data
- contact information
- social profiles
- relevant structured data

Prepare the site to connect with Google Business Profile.

Do not fabricate an address.

23. PERFORMANCE

The website needs to be extremely fast despite being visually rich.

Target excellent Core Web Vitals.

Use:

- responsive images
- modern image formats
- lazy loading
- responsive video
- poster frames
- deferred scripts
- code splitting
- minimal third-party scripts
- font optimization
- GPU-friendly animations
- reduced layout shift
- appropriate preloading
- mobile-first performance

Do not sacrifice performance simply because the site is cinematic.

24. ACCESSIBILITY

Treat accessibility as a first-class requirement.

Implement:

- semantic HTML
- keyboard navigation
- visible focus states
- sufficient contrast
- meaningful alt text
- accessible forms
- accessible navigation

- reduced-motion support
- screen-reader-friendly labels
- proper buttons/links
- no critical information conveyed solely through animation

The cinematic experience must gracefully degrade when motion is reduced.

25. MOTION SYSTEM

Motion is extremely important.

The Caves Branch River Estates website established the level of animation and interaction I expect.

Use:

- cinematic hero transitions
- scroll-triggered reveals
- image clipping
- image scaling
- subtle parallax
- horizontal movement where appropriate
- text masking
- staggered typography
- project-card transitions
- hover states
- smooth page transitions
- section reveals
- subtle cursor interactions where appropriate
- sticky storytelling sections
- controlled zooms
- video transitions

But:

Do not animate everything.

Motion should communicate hierarchy and create a feeling of quality.

Avoid gimmicky animations.

The motion language should feel:

editorial + architectural + cinematic

rather than:

tech startup + flashy + excessive

26. MOTION TIMING

Create a coherent motion system.

Define reusable timing tokens.

For example:

- micro interaction: 150–250ms
- standard UI transition: 300–500ms
- content reveal: 500–800ms
- cinematic transition: 800–1400ms
- page transition: approximately 700–1200ms

These are starting points, not hard rules.

Tune them based on actual visual testing.

Use easing curves consistently.

Avoid random animation durations throughout the site.

27. TYPOGRAPHY

Typography needs to feel premium.

Use a restrained typographic hierarchy.

Think:

- large editorial headlines
- small uppercase metadata
- elegant body typography
- generous line height
- large whitespace
- strong contrast between display and supporting type

Do not overuse bold weights.

Typography should be one of the site's major visual tools.

28. COLOR

Parlour should not look like a generic black-and-white agency.

Develop a restrained palette inspired by:

- warm white
- natural sand
- deep charcoal
- tropical greens
- muted earth
- subtle warm neutrals

Keep it sophisticated.

Do not make it look like a tropical tourism website.

The aesthetic should be:

tropical + architectural + editorial + luxury

29. IMAGE DIRECTION

Images should feel:

- cinematic
- editorial
- architectural
- human
- tactile
- premium
- place-driven

Prioritize:

- architecture
- landscapes
- people
- details
- materials
- interiors
- lifestyle
- aerial imagery
- cinematic frames

Avoid generic stock-photo aesthetics wherever possible.

Create an image/content model that allows every case study to have:

- hero media
- supporting media
- gallery
- video
- captions
- credits

30. SOCIAL MEDIA CONNECTION

The website should connect naturally to Parlour's social presence.

Do not create a giant social-media feed.

Instead:

- subtle Instagram/social links
- selected social work where useful
- social content can be repurposed into case-study/editorial content
- encourage discovery of Parlour's visual work

Social should reinforce the website.

The website should not feel dependent on social.

31. INSIGHTS / JOURNAL

Create an /insights section.

This should become the long-term SEO engine.

Initial editorial categories could include:

Real Estate Marketing

Hospitality Marketing

Branding

Development Strategy

Belize Property

Buyer Behaviour

Creative

Digital

Founder Stories

The system should support:

- title

- excerpt
- author
- date
- category
- hero image
- body content
- related articles
- related projects
- SEO metadata
- schema

The design should feel like an editorial publication, not a corporate blog.

32. CONTENT STRATEGY

The website should eventually allow Parlour to publish genuinely useful content such as:

- How North American buyers choose Belize property
- What developers get wrong about selling Belize real estate
- Why beautiful real-estate marketing does not necessarily create sales
- How to launch a development before construction is complete
- Why hospitality brands should own more of their direct booking funnel
- How to turn a property development into a destination brand
- Site-to-sales marketing
- Belize real estate buyer behaviour
- Development branding
- Hospitality positioning

This content should feed:

SEO

LinkedIn

Instagram

sales outreach

case studies

email

PR

33. INTERNAL LINKING

Build a strong internal-link architecture.

Examples:

Homepage → Work

Homepage → Services

Homepage → Insights

Work → Services

Work → related Work

Insights → Work

Insights → Services

Services → Work

Services → Contact

Case studies → Contact

This should help both users and search engines understand the site's topical authority.

34. CONVERSION STRATEGY

Every important page needs a logical next step.

Do not put:

"Contact us"

everywhere without context.

Use contextual CTAs.

Examples:

After a case study:

Have a project like this? Let's talk.

After strategy:

Not sure where the leak is? Start with a Growth Diagnostic.

After services:

Tell us what you're building.

At the end of the site:

If the place matters, the marketing should too.

Then:

Start a conversation

Use judgment. These are directions, not mandatory final copy.

35. MOBILE EXPERIENCE

Mobile is extremely important.

The site must feel intentionally designed on:

- iPhone
- Android
- tablet
- desktop
- large monitors

Do not simply stack the desktop site.

Redesign the hierarchy for mobile.

Maintain cinematic quality without creating terrible load times.

36. CONTENT MANAGEMENT

Architect the project so projects, services, insights, team members, and future locations can be updated without rewriting components.

Use a clean data-driven architecture.

At minimum, create reusable models for:

Projects Services Insights People Industries Locations Testimonials Media

The exact CMS/implementation should be chosen based on the current project stack and practicality.

If we already have an established stack from the Caves Branch River Estates project, reuse the strongest parts of that architecture rather than introducing unnecessary complexity.

37. DEVELOPMENT APPROACH

Before writing a large amount of code:

1. Inspect the existing project.
2. Determine the current stack.
3. Determine available assets.
4. Determine existing reusable components.
5. Determine deployment structure.
6. Determine whether there is already an animation system.
7. Determine whether there is already a CMS/data architecture.
8. Preserve good existing infrastructure where appropriate.

Do not blindly rebuild things that already work.

Then create the website systematically.

38. DESIGN SYSTEM

Create reusable design tokens/components for:

- typography
- spacing
- buttons
- links
- navigation
- project cards
- service cards
- media blocks
- section headings
- metadata
- image galleries
- video blocks
- CTA sections
- page transitions
- scroll reveals
- footer
- forms

Do not create every section as a one-off.

The site needs to be maintainable.

39. NAVIGATION

The navigation should be minimal.

Potential structure:

Work Services Approach About Insights Contact

Do not add unnecessary menu items.

Consider a sophisticated full-screen menu interaction inspired by premium creative agencies.

The navigation should remain usable and obvious.

40. FOOTER

The footer should include:

Parlour Creative

Short positioning statement

Primary navigation

Work

Services

About

Insights

Contact

Social links

Email

Phone/WhatsApp

Belize

Regional service areas

Copyright

Privacy

Terms

Do not clutter it.

41. SEO COPY PRINCIPLE

Never sacrifice the brand voice for SEO.

Do not write robotic paragraphs like:

"Parlour Creative is the best Belize marketing agency offering Belize digital marketing services..."

Instead:

Write sophisticated, human copy that naturally contains relevant terms.

Search engines should understand the subject because the site genuinely demonstrates expertise.

42. TRUST

The site needs visible trust signals.

Potential elements:

- Blue Ocean Belize
- named projects
- client logos where authorized
- verified metrics
- testimonials
- founder credentials
- Artform experience
- project locations
- industries
- specific deliverables
- actual work

Avoid fake testimonials.

Avoid fake logos.

Avoid meaningless badges.

Avoid invented awards.

43. CASE STUDY DATA MODEL

Build a reusable project object roughly like:

```
{ slug, title, client, location, year, sector, services[], heroMedia, gallery[], videos[],
```

introduction, challenge, strategy, execution, outcome, metrics[], testimonial, relatedProjects[], seo }

Adapt this to the existing project architecture.

44. SERVICE DATA MODEL

Create structured service data.

Example:

```
{ slug, title, category, shortDescription, longDescription, capabilities[], relatedProjects[], relatedInsights[], seo }
```

Again, adapt to the existing stack.

45. IMPORTANT — DON'T OVERWRITE THE BRAND WITH GENERIC AI COPY

The website should NOT sound like it was written by AI.

Avoid:

"where creativity meets strategy"

"we're passionate about..."

"we believe in pushing boundaries..."

"your success is our success..."

"innovative solutions..."

"transform your brand..."

"take your business to the next level..."

Those phrases are banned unless there is a genuinely compelling contextual reason.

Use specific language.

Use named projects.

Use numbers.

Use places.

Use actual capabilities.

Use commercial language.

46. COMMERCIAL LANGUAGE

Where appropriate, speak about:

- sales
- bookings
- qualified enquiries
- lead quality
- direct revenue
- conversion
- inventory
- demand
- buyer behaviour
- positioning
- distribution
- market readiness
- launch
- growth

Do not make guarantees.

Parlour cannot control:

- pricing
- inventory
- sales teams
- market conditions
- client follow-up

The site should communicate commercial accountability without promising guaranteed outcomes.

47. THE SIGNATURE PRODUCT

Make the:

Growth Diagnostic

feel like a real proprietary Parlour product.

Do not hide it as another service.

It should have its own visual treatment.

Potential flow:

Find the leak.

Understand the buyer.

Rebuild the system.

Create the 90-day plan.

This can eventually become one of Parlour's most effective lead-generation mechanisms.

48. "SITE TO SALES" AS A SIGNATURE FRAMEWORK

Develop a visual framework around:

SITE → STRATEGY → BRAND → STORY → EXPERIENCE → DISTRIBUTION → SALES

This should become one of the most memorable visual concepts on the website.

Eventually this can become a proprietary Parlour framework.

Do not overbrand it prematurely.

Make the concept useful first.

49. REGIONAL BRAND

The website must communicate that Belize is the base, not the ceiling.

Potential language:

Based in Belize. Built for the Americas.

or a better variation if you find one.

The visual language should connect naturally to:

- Caribbean
- Central America
- Latin America
- North American buyers
- international hospitality
- international real estate

Avoid making the company look geographically narrow.

50. WHAT I WANT YOU TO DO NOW

Do not simply give me recommendations.

Start building.

Work directly in the current project.

First inspect the existing codebase and determine:

- framework
- package manager
- routing
- styling
- animation libraries
- component architecture
- deployment setup
- existing reusable code from the Caves Branch River Estates project

Then begin implementing the Parlour website.

Do this in logical stages:

Stage 1 — Architecture

Establish:

- routes
- page structure
- data models
- SEO architecture
- design tokens
- global layout
- navigation
- footer

Stage 2 — Design system

Establish:

- typography
- colors
- spacing
- buttons
- cards
- media blocks
- transitions
- animation primitives

Stage 3 — Homepage

Build the full cinematic homepage.

Stage 4 — Work

Build the Work index and reusable case-study template.

Stage 5 — Services / Approach

Build the service architecture and site-to-sales story.

Stage 6 — About

Build the founder/company story.

Stage 7 — Insights

Build the editorial/SEO system.

Stage 8 — Contact

Build the conversion experience.

Stage 9 — SEO + performance

Implement technical SEO, metadata, schema, sitemap, robots, accessibility and performance optimization.

Stage 10 — QA

Test:

- desktop
- tablet
- mobile
- keyboard
- reduced motion
- accessibility
- broken links
- image loading
- video loading
- SEO metadata
- structured data
- responsive behavior
- animation timing
- page transitions
- form behavior
- Core Web Vitals

51. DO NOT STOP AT A SKELETON

I do not want:

- placeholder gray boxes everywhere
- a generic navbar
- three cards
- "Lorem ipsum"
- a basic hero
- a list of services
- unfinished routes

Build as much of the real experience as possible using the information available.

Where imagery is unavailable, create a clear asset slot using the correct aspect ratio and component behavior rather than designing around random stock imagery.

Where actual case-study information is missing, create a structured placeholder that can be populated later.

52. FINAL QUALITY BAR

Before considering the work complete, ask:

If a \$10M developer in Belize landed on this site after being referred by a trusted contact, would this website make Parlour look capable of handling their project?

Then ask:

If a luxury hotel owner in Mexico saw this website, would they understand that Parlour is capable of operating beyond Belize?

Then:

Does this feel like a serious creative company or like a freelancer with a website?

Then:

Does the website prove what Parlour does, or merely claim it?

Then:

Is the Work section strong enough that someone could spend 10 minutes exploring it?

Then:

Does the site create a clear path from curiosity → credibility → understanding → enquiry?

If the answer to any of these is no, continue improving the site.

53. FINAL CREATIVE DIRECTION

The overall feeling should be:

Editorial. Architectural. Cinematic. Tropical. Intelligent. Distinctive. Commercial.

Not:

Corporate. Generic. SaaS. Tourist. Trendy. Loud.

The site should feel like the intersection of:

Gladstone-level creative discipline + high-end architecture/editorial design +
Belize/Caribbean sense of place + modern digital performance + serious commercial
strategy.

Parlour's strongest idea is not:

"We make beautiful marketing."

It is:

We understand the place, the business, the buyer, the story, and the system required to turn
all four into commercial momentum.

Build the website around that idea.

Start by inspecting the existing project and then begin implementation.
